

JUNE MEETING HOUSEPLANT DRAW

Calathea lancifolia 'Ruffles' is part of a large family that includes the prayer plant. It is notable for its ruffled dark green leaves, with purple undersides and stems. Keep it in medium to low indirect light and never allow it to receive direct sunlight, which will burn the leaves. Grow in a fast-draining soil which should be kept moist but not waterlogged. Being a tropical plant, it likes high humidity which can be achieved by spritzing with water or place pot on a layer of pebbles in the saucer and adding water, ensuring the pot is not touching the water.
